

TABLE OF CONTENTS

- **Impossible Astronaut** — An introduction to the book and suggestions for getting the most out of it.
- **Choose Your Wand** — If you're going to write your own code, you have to use a text editor. If you don't already have a favorite, this chapter will help you pick one out.
- **Giant Undo Button** — A gentle introduction to the basics of using Git in your projects.
- **Gettin' Sassy** — The very basics of using SASS. Just enough to get you started, but more than enough to reap the benefits.
- **Just Enough HTML** — Learn how to mark up a document quickly and efficiently.
- **Mastering CSS Selectors** — Learn the art of writing intricate CSS selectors.
- **Photoshop in the Browser** — Learn features in CSS3 that can save you a trip to Photoshop.
- **Developer Tools** — Chrome's developer tools will save you time and many, many headaches.

- **Build Your Own Grid** — Use Sass to build a simple grid system from scratch.
- **CSS Layout with Flexbox** — Use flexbox to speed up the process of laying out elements on the page.
- **A Responsive Aside** — The basic tools you need to create a responsive design.
- **Advanced Tools** — More advanced weapons to add to your arsenal after you've mastered the basics.
- **Thanks**
